The indicator above illustrates the position of this Fund on a standard risk/reward category scale. This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean investment is 'risk free'. This indicator is not a measure of the risk that you may lose the amount you have invested.

The Fund is rated 5 due the nature of its investments. The following are risks materially relevant to the Fund which are not adequately captured by the indicator:

**Derivatives Risk:** The Fund is entitled to use derivative instruments for investment purposes and for efficient portfolio management and/or to protect against exchange risks. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid. This could adversely impact the value of the Fund. The Fund may enter into various financial contracts (derivatives) with another party. Where the Fund uses futures or forward foreign currency contracts (derivatives), it may become exposed to certain investment risks including leverage, market, mismatching of exposure and/or counterparty risk, liquidity, interest rate, credit and

management risks and the risk of improper valuation.

While the Fund is not expected to have exposure to leverage to a material degree, any movement in the price of these investments can have a significant impact on the value of the Fund and the Fund could lose more than the amount invested.

**Market Risk:** The Fund invests in units of collective investment schemes which are consistent with the Fund's investment objective and restrictions. The Fund which invests in other Eligible CIS is indirectly exposed to all of the risks applicable to an investment in Eligible CIS. The value of these units can be negatively affected by changes in the Fund or its industry or the economy in which it operates.

**Equity Market Risk:** The defined return investments within the Fund, whether via FDIs or Transferable Securities, are all dependent on global equity index performance. In the event of sustained, poor equity market performance the value of the Fund could fall and not recover.

**Liquidity Risk:** At times, some shares or securities may trade infrequently which means it may be more difficult for the Fund to buy and sell them.

**Other Risks:** Other risks the Fund is exposed to include but are not limited to are possible changes in interest rates, changing expectations of future market volatility, changing expectations of equity market correlation and changing dividend expectations.

For a more detailed explanation of the risks, please refer to the "Risk Factors" section of the Prospectus and the Supplement.
