What are the risks and what could I get in return?

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the fund. The risk and reward category shown is not guaranteed to remain unchanged and may change over time.

The lowest category does not mean investment is 'risk free'. This indicator is not a measure of the risk that you may lose the amount you have invested.

We have classified this product as 3 out of 7, which is an average risk class.

This rates the potential losses from future performance at a medium, and poor market conditions could impact the capacity of the Fund to pay you. The risk indicator assumes you keep the product for 3 years (where there is no exact maturity date). The actual risk can vary significantly if you cash in at an early stage.

Be aware of currency risk. You will receive payments in a different currency, so the final return you get will depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

The scenarios presented are an estimate of future performance based on proxies of similar products, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself, but may not include all the costs you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.
This share class was originally launched on 27 November 2007 and the past performance of the Fund can be found in the Calamos Fund Literature section of the Manager's website https://www.geminicapital.ie/ascender-fund-literature/. The Fund went through a merger and the share class was re-launched on 09 November 2020.

What happens if GemCap is unable to pay out?

As a shareholder in the Fund, you would face a financial loss in the event of a default of the Fund. The sub-fund is not a guaranteed UCITS and as a result there is no guarantee scheme in place which provides a guaranteed rate of return.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for two different holding periods. They include potential early exit penalties. The figures assume you invest EUR 10,000. The figures are estimates and may change in the future.

Costs over time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment Scenarios EUR 10,000	If you cash in after 1 year	If you exit after 3 years
Total costs	EUR 190	EUR 618
Reduction in Yield (RIY) per year*	1.90% (each year)	1.90% (each year)

Composition of Costs

The table below shows the impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.

This table shows the impact on return per year

	Exit costs	0.00%	The maximum impact of the costs of exiting your investment when it matures.
Ongoing Costs	Transaction costs	0.00%	The impact of the costs of us buying and selling underlying investments for the product.

Incidental Costs	Performance fees	0.00%	The impact of the performance fee. We take these from your investment if the product outperforms its high water mark, of (a) the highest previous net asset value per share of the series concerned at the end of a performance period; and (b) the initial issue price of the shares of that series.
